

Revolutionary Trace Mineral Technology

 **IntelliBond[®] VITAL 4**
A Product of Micronutrients
Better trace minerals, better value

Precision protein tubs are fortified with a unique and highly available form of trace minerals ... **IntelliBond** zinc, copper and manganese from *Micronutrients*. Traditionally, trace mineral choices have been limited to minerals categorized as either organic or inorganic, but a unique category—hydroxy trace minerals—has been identified to deliver a source of trace minerals that is proven to work in harmony with dietary ingredients, not against them.

Who is Whitestone Feeds?

Whitestone Feeds is a premier manufacturer of all forms of animal feed products. Flexible service, exceptionally high quality and low costs set our company apart from other feed companies in the Midwest and Southeastern United States marketplace.

God has blessed Whitestone Feeds with the opportunity to serve the feed industry. We honor Him by working with our customers, employees, suppliers and technology partners with the highest degree of respect and concern for THEIR personal good. We strive to operate every aspect of the company based on Biblical principles. The members of our staff are fully engaged with our customers and dedicated to meeting and exceeding their expectations.

Whitestone Feeds provides the most advanced animal nutrition technology through customer focused manufacturing solutions.

Feeding Recommendations

Product	Recommended Usage	Mineral Supplementation
Precision 25	<p>READ AND FOLLOW LABEL INSTRUCTIONS</p> <p>To be fed free choice to beef cattle on pasture. Ensure cattle have adequate pasture or roughage available and are not starving for minerals or salt. Provide at least one tub for 10 head. Always make sure cattle have access to a source of clean water at all times.</p>	<p>The feeding of Whitestone Feeds free choice mineral supplements in conjunction with any protein tub is highly recommended. In addition to the nutritional benefits, the use of minerals along with tubs may help control consumption of the tubs.</p>

Tub Management

Provide tubs as protein or energy deficiency is suspected and before noticeable loss of body condition. Young cattle grazing mature forages may require continuous access, regardless of forage quality.

Proper placement of the tubs in a pasture will affect consumption. Cattle will visit more frequently and consume more product when placed near water or loafing areas.

If consumption is lower than expected, increase the number of tubs. If aggressive animals dominate the tubs, spread the tubs out to discourage social interaction between competing animals.

Custom Formulation

Occasionally, a customer may have special needs that are not met by the nutrition in the standard line of **Precision** protein tubs. No problem. Our company is capable and eager to custom manufacture products to meet those special requests. Contact your Whitestone Feeds Sales Professional for more information.
